Deployment and client/server-side testing
COSC360 - Project Group #31
Website: http://schaad.ca/nerdForum/

Server-side Testing:

- ❏ Tested on major browsers, site functions properly and looks consistent across these browsers.
- ❏ Tested on mobile across several browsers, site functions properly and adapts to mobile viewports .
- ❏ User functionality such as creating an account, changing information, posting, replying, etc… all working as intended. Database reflects these changes for all users, ensuring the database is working as intended.
- ❏ Made changes to PHP INI inputBuffering, change done to allow header() to redirect as it did on localhost.
- ❏ Email password recovery works as intended, sending email to a user if they forgot their password.

Client-side Testing

- ❏ Localhost version of the site functions across major browsers
- ❏ Localhost site functions the same as server
- ❏ User functionality tested and works as intended on localhost server.
- ❏ Tested on mobile across several browsers, site functions properly and adapts to mobile viewports.
